

SHARP SHOOTER

GLYPHOSATE 480SL

Post-Emergent General Use Herbicide

- Highly effective non-selective systemic action, absorbed by foliage with rapid translocation throughout the weed
- Provides control against perennial grasses, broadleaves, and sedges as well as annual weeds when applied via foliar spray. An application of Sharpshooter controls both the above and below ground parts of emerged weeds
- Zero tillage applications
- No residual soil activity
- High quality Glyphosate at an affordable price

Use prior to plowing and planting. Low volume spraying during the early dry season at spray solutions ranging from 200 to 400 liters of water will provide excellent results.

Dosage: 16–24 Tbsp/ 16 liters of water

TARGET WEEDS

Grasses

Broadleaves

Sedges

*Use prior to plowing
and planting.*
